Release Notes

V.97 | August 11, 2022

What's Fixed?

Image Gallery link label
Default link label was updated to more generic phrasing (maintaining the ability to add a custom label) and the text link now appears when no image caption has been created.

News Feed Block image display
News feed blocks were using the placeholder image rather than the article hero image in the thumbnail display. This has been updated so when no thumbnail image has been added to an article, the News Feed Block will instead show the hero image.

Content migration
Content migration was not migrating all site content as expected. The migration script has been updated to move pages properly.

Profiles duplicate accounts
Duplicate accounts were created for some users when logging into the system. Account configuration has been updated so impacted users can now access their correct profiles.

Page Filter Tags ordering
The order of taxonomies was not getting captured properly on save. This was resolved so admins can now drag and drop taxonomy terms to re-order them.

Backend Items and Updates
- LiveWhale Update
- Drupal 9.3.19 security update
- Drupal 7.91 security update
- News report error
- Removed Homepage Search Module

What's New?

Pride Logo
To celebrate Calgary Pride, Brand Experience created a UCalgary Pride logo to display in the header of UCalgary Drupal sites.

More info block display
Implemented the ability to stack icons above the heading on more info block sections.

Profiles Bulk department/unit function
New admin function in the profiles system allows Profiles Group Admins to bulk add unit/departments to profiles within their team.

Upcoming Items

Fixes
- Profiles SEO and internal site search (ongoing)
- Internal site search configuration issue

Enhancements
- Image Gallery Hover States
- Trio CTA button colour and link area UX enhancement
